

FIX YOUR POWER FACTOR. STOP PAYING FOR POWER YOU NEVER USE.

Punit Powercare designs and manufactures Thyristorised APFC panels and switchgear for industrial and commercial facilities — engineered in Nashik, trusted across Maharashtra.

SWITCH TO SUCCESS WITH PUNIT POWERCARE

01

Pioneers in Thyristorised APFC

Among the first to bring sparkless, solid-state power factor correction to the region.

02

Manufacturing + AMC, one roof

APFC panels, LT panels and switchgear — designed, built and maintained by the same team.

03

Real care of customer & equipment

The Trident Power Enterprises principle behind every panel we build and every call we answer.

— ABOUT US

REAL CARE OF CUSTOMERS AND EQUIPMENT

24×7 Punit Powercare is a well-known name in power management and electricity — one of the pioneers in developing Thyristorised APFC systems in the region. We're known as much for after-sales service as for the panels themselves, because a panel that isn't supported isn't really a solution.

Dedicated, knowledgeable staff are available seven days a week, twenty-four hours a day, to answer questions and dispatch a field service technician — during the warranty period, and after it, under AMC.

Trident Power Enterprises means real care of customer and equipment — the principle behind every panel we build and every call we answer.

Entity	Punit Powercare
Focus	APFC & Switchgear Care
Registered office	Nashik, Maharashtra
Workshop	MIDC Ambad, Nashik
Support	24×7, 7 days/week
Speciality	Thyristorised APFC

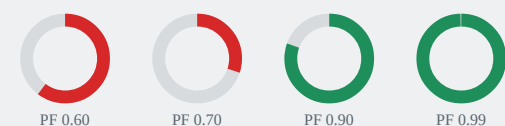

— THE PROBLEM

LOW POWER FACTOR IS A HIDDEN LINE ITEM ON YOUR BILL

Power factor is the ratio of working power to total power — the working power plus the non-productive reactive power circulating through your facility. Technically, it's the cosine of the angle between voltage and current.

A power factor between 0.95 and 1.0 means your electrical power is being put to maximum use. Anything below 0.9 means you're drawing more current than you need — and paying for it through power factor penalties, reactive power charges, or surcharge fees.

Equipment like transformers, motors, air conditioners, furnaces, rolling mills, spinning mills and variable drives all shift the phase angle between current and voltage — exactly what drives that penalty up.

THYRISTORISED APFC PANELS — FACTORY FLOOR

— WHY CORRECTION MATTERS

WHAT'S ACTUALLY DRIVING THE PENALTY

Connected equipment — transformers, motors, air conditioners, furnaces, rolling mills, spinning mills and variable drives — all cause a phase shift between current and voltage. That shift means it takes more current to deliver the same amount of active power, and the difference lands directly on your electricity bill. Power factor correction closes that gap at the source.

— WHY IT PAYS FOR ITSELF

POWER FACTOR CORRECTION, IN FOUR NUMBERS

Investing in correction is an easy, economically sound decision — these systems typically pay back within 3 to 15 months, depending on your load profile and tariff structure.

BENEFIT 01

Fewer distribution losses

Losses are proportional to the square of the current. Improving PF from 65% to 90% cuts losses by roughly 48%.

$$\% \text{ loss } \downarrow = 100 - (0.65/0.90)^2$$

BENEFIT 02

More usable KW

KW = KVA × PF. A higher PF unlocks more working power from the same KVA demand — room for more motors or lighting.

$$\text{KW} = \text{KVA} \times \text{PF}$$

BENEFIT 03

Better voltage regulation

Reduced line voltage drop means steadier voltage at your equipment, and more efficient motor performance.

BENEFIT 04

Smaller cable & switchgear

Lower current requirement means new installations can use smaller transformers, cables and switchgear.

$$I = (\text{KVA} \times 10^3) / (\sqrt{3} \cdot V)$$

600 KVA DEMAND — AVAILABLE KW VS. POWER FACTOR

POWER FACTOR	60	70	80	90	100
ACTIVE POWER (KW)	360	420	480	540	600
REACTIVE POWER (KVAR)	480	428	360	262	0

Fixed capacitors vs. Thyristorised APFC: fixed capacitor banks can over-compensate — pushing PF into "leading" territory, which carries its own penalty — and stay in circuit (and consuming power) even at low load. Punit Powercare's Thyristorised APFC switches capacitor steps in and out automatically, avoiding both problems, with no chattering or sparking at the point of switching.

— INSIDE THE PANEL

WHAT THYRISTORISED SWITCHING GIVES YOU

- 01 No inrush current — precise auto zero-current search logic.
- 02 No current/voltage surge — transformer life goes up, not down.
- 03 Solid-state switching at 200V — no chattering or sparking.
- 04 Small steps mean tighter, closer compensation of PF.
- 05 Live parameter display, with RS-232 printout on demand.
- 06 No moving parts — genuinely maintenance-free.
- 07 Short payback period, long-term running savings.

— WHAT WE DO

MANUFACTURING, SUPPLY AND SUPPORT — UNDER ONE ROOF

 Contactor-based APFC panels Manufactured in-house, built for reliable step-switching.	 Thyristor-based APFC panels Our specialty — precise, sparkless, maintenance-free switching.	 LT Panels — PCC, MCC, PDB, PLC Plus fire panels and temperature control panels, made to spec.
 Voltage stabilizers Servo and relay-based, normal and odd range, supplied and installed.	 UPS supply Sized and supplied for your facility's backup power needs.	 ACB & VCB servicing Handled by an expert, well-trained field team.
 AMC — APFC & LT panels Comprehensive and non-comprehensive annual maintenance contracts.	 Panel material supply A single source for the electrical panel components you need.	 RKVAH, AHF & ASVG Leading RKVAH solutions plus active harmonic filter and ASVG supply.

— WHO IT'S FOR

USEFUL TO ALMOST ANY LOAD-HEAVY OPERATION

Rolling Mills	Furnace Loads	Cement Plants	Steel Plants	Automobile Industry	Commercial Complexes
Rice Mills	Stone Crushers	Hospitals	Restaurants & Hotels		

— TRUSTED BY

OUR VALUABLE CLIENTS

CROMA	DATAR	RIM GROUP	SB POLYGREEN	AGROMARK
MEDILIV HOSPITAL	LIEBHERR	JAKSON	ASHOKA	MEDICOVER

— 24×7 SUPPORT

SERVICE BACKUP THAT DOESN'T CLOCK OUT

24×7 Punit Powercare provides comprehensive support both during warranty and after, once you enter into an AMC — dedicated staff available 7 days a week, 24 hours a day, to dispatch a field technician to your site.
